Construction Documents

Acuform was selected for design and construction related services for a new dental facility on San Antonio's far northeast side. Working with both Advanced Dental Associates and the Contractor, we amended the existing schematic design plans to better meet patient's needs and satisfy building code requirements. The building program included one large common operatory, several private hygiene rooms, a central laboratory and sterilization room, several private office and common spaces.

“Acuform was hired to update existing schematic plans and oversee all dental equipment was properly coordinated during the construction phase.”

With an in-depth knowledge of the City's building codes and its approval process, Acuform worked with the client and general contractor to amend the schematic design to satisfy building code requirements while better meeting patients' needs. Acuform also provided assistance during construction to ensure proper coordination between the project design and the installation of required dental equipment.
